About

My name is Letícia and I was born in Brazil. I've recently moved to Amsterdam and I'm looking forward to find a position in front end development. I hope to find a place that shares my core values: dedication to **innovation** and **growth**, **teamwork** and **proactivity**.

Education

I've got a bachelor degree in International Relations in 2015 at UFSC (Federal University of Santa Catarina). Only after that I realized my true passion was in technology.
I went back to UFSC in 2017 to pursue the Information System bachelor degree, which is on hold for now.

Professional Experience

On 2016 I started an internship at **Lagoasoft.** My main activity was to help and keep up with team. After 3 months I got offered a permanent position as a Front End Developer and stayed until Feb. 2018.
I became responsible with the front end of the biggest application of the company, as well as with the development and design of static and dynamic pages. Besides that, I lead the implementation of the front end in a new project, being also responsible for planning the interaction design.
Prior to that, I had several other internships related to tech support, management and international relations.
